## **Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

1. (Currently Amended) A shelter without walls capable of producing electrical energy comprising:

a canopy having a width and a length defining a sheltered area and having a photovoltaic device capable of producing an electrical current when exposed to a light source, said photovoltaic device associated with said canopy to produce electrical current from sunlight;

a supporting structure connected to and supporting said canopy and being laterally spaced past the edge of the canopy so as to permit permitting substantially unobstructed access to the sheltered area; and

an electrical load operatively connected to the photovoltaic device for utilizing the electricity generated by the photovoltaic device when the photovoltaic device is exposed to light.

- 2. (Original) The shelter of claim 1 wherein said photovoltaic device is supported by the canopy.
- 3. (Original) The shelter of claim 1 wherein the photovoltaic device is contained on or in the canopy.
- 4. (Original) The shelter of claim 1 wherein the photovoltaic device forms the canopy.

Appl. No. 10/679,075 Amdt. dated May 5, 2006 Reply to Office action of February 22, 2006

- 5. (Original) The shelter of claim 1 wherein the photovoltaic device is selected from the group consisting of crystalline photovoltaic systems, flexible thin film photovoltaic systems, stacked photovoltaic layers and photovoltaic and light emissive layers.
- 6. (Original) The shelter of claim 1 further comprising a first photovoltaic device oriented to receive sunlight and a second photovoltaic device directed toward the ground.
- 7. (Currently Amended) The shelter of claim 6 wherein said canopy has an upper surface and an underside and an artificial light source is affixed to the underside or dispersed within the second photovoltaic device.
- 8. (Original) The shelter of claim 5 wherein said photovoltaic device is transparent.
- 9. (Original) The shelter of claim 8 wherein the transparent photovoltaic device is composed of multiple layers of flexible thin film transparent photovoltaic material.
- 10. (Original) The shelter of claim 1 further comprising a light emitting diode associated with the photovoltaic device.
- 11. (Original) The device of claim 10 wherein the light emitting diode is capable of displaying human readable information.
- 12. (Original) The shelter of claim 10 wherein the light emitting diode is a flexible thin film light emitting diode.

Appl. No. 10/679,075 Amdt. dated May 5, 2006 Reply to Office action of February 22, 2006

- 13. (Original) The shelter of claim 1 wherein the photovoltaic device further comprises a light emitting coating and the photovoltaic device is capable of generating electricity from the light emitted by the light emitting coating.
- 14. (Original) The shelter of claim 1 wherein the electrical load is selected from the group consisting of the power distribution grid of a utility company and a battery.
- 15. (Original) The shelter of claim 14 wherein said battery is operatively connected to a light which illuminates said sheltered area.
- 16. (Withdrawn) A system for generating electricity from a parking lot comprising:

an outdoor parking area having at least one vehicle parking space;

a canopy having a width and a length defining a sheltered area for said parking space and having a photovoltaic device capable of producing an electrical current when exposed to a light source, said photovoltaic device associated with said canopy to produce electrical current from sunlight;

a supporting structure connected to and supporting said canopy and permitting substantially unobstructed access to the sheltered area; and

an electrical load operatively connected to the photovoltaic device for utilizing the electricity generated by the photovoltaic device when the photovoltaic device is exposed to light.

17. (Withdrawn) A method of producing electricity comprising:

providing a canopy having a width and a length defining a sheltered area and having a photovoltaic device capable of producing an electrical current when exposed to a light source, said photovoltaic device associated with said canopy to produce electrical current from sunlight;

supporting the canopy without walls above an outdoor vehicle parking area with a supporting structure that permits substantially unobstructed access to the parking area;

Appl. No. 10/679,075 Amdt. dated May 5, 2006 Reply to Office action of February 22, 2006

exposing the photovoltaic device to light to generate electricity; and connecting an electrical load to the electricity.

- 18. (Withdrawn) The method of claim 17 wherein said electrical load is a power meter and the method further comprises reverse metering the power meter.
- 19. (Withdrawn) The method of claim 17 wherein said electrical load is a utility company power distribution grid.
- 20. (Withdrawn) The method of claim 17 further comprising producing electricity at night with a light emissive material operatively associated with the photovoltaic device dispersed within or placed in the (PV) roof's vicinity.
